### **Job Description**

We at tekVizion are independent experts in Business Communications. We provide professional services, testing, integration and custom development services to service providers, vendors, and enterprise customers so that we can help their businesses accelerate time to value, improve the quality and futureproof their investments in their Business Communications networks.

tekVizion offers a range of services including interoperability testing, on-demand access to virtual lab environments, integration services and custom application development. Founded in 2002, tekVizion hosts the first interoperability lab of its kind. The company's extensive lab resources include over 250 network elements and a team of dedicated specialists, certifying over 400 applications per year.

If you are looking for a new challenge and would like to work in an active environment with current technologies and if you are a highly capable, and versatile person then tekVizion is the place for you.

### **GENERAL RESPONSIBILITIES**

tekVizion is looking for an expert Scrum Master to join our Product Engineering team to ensure that our applications and infrastructure are designed and implemented to the highest standard maintaining and enhancing our customer trust. If you enjoy analyzing system services, operating systems, networks and applications from a quality, usability, and serviceability perspective, and you are skilled at discovering functional issues that appear under new software delivery, this position will provide you with a challenging opportunity. Seasoned professional in agile methodologies and have significant experience as Scrum Master.

**Desired Skills:**

Minimum of 5 years' experience on product release experience.

Should possess good communication and collaboration skills.

Should have strong hands-on JIRA workflow management.

Certified Agile Scrum Master

**Roles and Responsibilities:**

- To run daily scrum meetings with engineering Team
- To work with development and QA on estimate of product Epic/Stories
- To collaborate with engineering, product management, customer engineering team and prioritize product backlogs and do release planning
- Communicate on product release scope and status to all stake holders
- Facilitate sprint execution problems by coordinating with respective stake holders and resolve them on time to have successful sprints
- Define MVP and done criteria for stories and track the deliverables (software installer, documentation) of the sprint
- Have scrum ceremonies and scrum retrospective on overall release
- Understand the existing process and bring process change to execute efficiently with high predictability.
